===NTSB Downloadable Aviation Datasets===

Description:

-Datasets containing all aviation investigation data from 1962 to present, updated monthly and weekly (Microsoft Access formatted, MDB)

Available Files:

-avall.zip (aviation data from 2008-present, updated monthly)

-codman.pdf (aviation coding manual for pre-1982 dataset)

-eadmspub.pdf (avall.zip database schema)

-eadmspub_legacy.pdf (pre2008.zip database schema)

-pre1982.zip (aviation data from 1962-1981)

-pre2008.zip (aviation data from 1982-2007)

-updaymonth.zip (aviation data from 1983-present, updated weekly)

===Release Notes===

Release 3.1 Changes (Release Date: 5/05/26):

-As of May 05, 2026, applicable country data has been updated to align to the current U.S. government GENC standards governed and maintained by the National Geospatial-Intelligence Agency (NGA)

-This GENC Standard is the U.S. Government profile of ISO 3166 *Codes for the representation of names of countries and their subdivisions*. It specifies an authoritative set of country codes and names for use by the Federal Government for information exchange, using ISO 3166 (Parts 1 and 2) names and code elements wherever possible, with modifications only where necessary to comply with U.S. law and U.S. Government recognition policy

-This update only impacts data that did not align to the NGA GENC standards

Release 3.0 Changes (Release Date: 3/01/24):

-As of March 01, 2024, the ‘findings’ table in the AVALL monthly and weekly update MDB downloads has been modified to include a new field ‘cm_inPC’

-The valid values for this new field are TRUE and FALSE, indicating whether the associated finding area was cited in the accident probable cause statement as a cause or contributing factor

-This change is consistent with the ‘cm_inPC’ field and values that also appear in the CAROL search tool JSON download files, and replaces the legacy ‘cause_factor’ field in the MDB ‘findings’ table that has been deprecated

-Existing data in the ‘cause_factor’ field for cases released prior to October 2020 will be retained but the field will not be populated for future cases

-The ‘cm_inPC’ field has been back-filled for all records in the AVALL file using the logic, if ‘cause_factor’ = ‘C’ or ‘F’ then cm_inPC = TRUE else FALSE

Release 2.9 Changes (Release Date: 10/26/23):

-Adjusted 3,500 records (from 1982) to improve data availability
